

Simplifying System Management

SYSGEM LOGFILE CONCENTRATOR

The multi-platform log data manager by Sysgem AG

Logfile Concentrator

Multi-platform
log file data management

Ensuring security and compliance of an organization's IT infrastructure necessitates effective log data and configuration management. This can become a challenging and time-consuming task for organizations relying on a complex combination of modern and legacy system environments.

Sysgem's Logfile Concentrator is a comprehensive Windows-based tool to integrate streams of log file data from multiple sources in one single centralizing location. Log data is collected from remote multi-platform servers and end-user devices, then stored in a central database for analysis and regulatory compliant archiving.

Identify security risks with intelligent filtering tools as well as automated reporting and customizable user-defined alarms. Records are displayed in a real-time user-customizable display as they are

generated, and a full web browser interface enables remote access.

Supported data sources include Windows Event Logs, UNIX/Linux syslog, OpenVMS Audit Journals and SNMP traps while common ODBC databases (such as MS SQL, Oracle and MS Access) are supported for log storage.

As part of the Sysgem product family, Logfile Concentrator can be used stand-alone or complementary to our flagship product Sysgem Enterprise Manager (SEM) as part of a comprehensive system management toolset covering your organization's entire IT environment.

Understanding the challenges and opportunities of maintaining legacy infrastructure critical to your business's success, Sysgem offers dedicated 24/7 support as well as customization services for our customers' specific needs — regardless of the organization's size.

KEY FEATURES

Centralized
Log File Database

Automated Archiving &
Reporting

Customizable
Record Displays &
Advanced Querying

Unified Windows Event Log,
syslog, OpenVMS Audit
Journal & SNMP Trap
Management

Audit Trail &
Compliance Management

Real-time Alerts

About Sysgem AG

Founded in 1998 by former DEC and IBM engineers in Switzerland, Sysgem has been developing innovative solutions to simplify system, identity and access management for over 20 years.

Harmonizing modern and legacy operating systems together in one tool

Since its beginnings Sysgem has focused on integrating the management of both modern and legacy systems into powerful multi-platform tools.

Sysgem's solutions have been used for over two decades by internal and external IT teams of large enterprises and SMBs as well as governmental and military institutions around the world, as part of their holistic system management strategy.

Customizable solutions to empower your success

Our key focus on customizable and versatile system management products has allowed Sysgem's customers to easily develop unique solutions specific to their evolving IT management needs of their often mission-critical systems.

Uncompromising support for mission-critical systems

Together with our partners, Sysgem provides full 24/7 support for OpenVMS, Windows, Linux, UNIX and IBM AS400 iSeries systems so our customers can rely on us to provide the tools to keep their systems running efficiently at peak performance.

Contact us today to find out how Sysgem can streamline your organization's infrastructure management.
